

Carbon Off Set Opportunities with Treemendous York

We've found a way to plant trees and Hedgerows to reduce your carbon footprint.

If you're a local landowner or land manager interested in having trees planted on your property and want to find out about the range of benefits trees and hedgerows can bring to farmland and urban environments, then we'd love to hear from you.

By offering land you own you can:

- encourage the planting of more trees within the city's boundary
- help to increase the low tree canopy level in York from 10.8% to 13%
- assist in carbon capture & storage
- help the City of York to achieve net zero

See <https://www.woodlandtrust.org.uk/climate-change/carbon-trees/>

Next Steps-

- offer land
- ask us for a copy of the document 'Partners in Woodland Creation: a way to work with firms, companies, and landowners '
- we can provide various types of support for landowners who are interested in tree and hedgerows, planting from November to March, followed by woodland maintenance
